

ERIC VOLFSON

QA MANAGER | QUALITY ENGINEERING | FINTECH & DIGITAL ASSETS

Vaughan, ON • 416-303-8290 • eric.volfson@gmail.com

PROFILE

Quality Assurance leader with 15 years of experience across capital markets, digital assets, spot and margin trading, and mission-critical financial systems. Experienced in QA leadership, test strategy, system integration, performance and capacity testing, automation, CI/CD, test environment management, and production-risk analysis. Career progression spans hands-on QA, environment management, technical test leadership, senior consulting, and QA management at TMX and Kraken.

CORE EXPERTISE

QA Leadership & Team Development • Quality Strategy • AI Driven Quality • Capital Markets • Digital Assets & Crypto • Spot/Margin Trading • Trading Engines • System Integration • Performance & Capacity Testing • Test Automation • CI/CD • Release & Production Risk • Test Environment Management

PROFESSIONAL EXPERIENCE

KRAKEN DIGITAL ASSET EXCHANGE

Quality Assurance Manager | 2025–Present

- Interview, hire, onboard, train, and mentor QA staff.
- Develop test plans for initiatives ranging from one-week changes to six-month projects.
- Allocate QA resources across concurrent projects while coordinating dependencies with development, product, engineering, and external teams to protect delivery timelines.
- Review GitLab merge requests to verify critical business scenarios and appropriate test and code coverage.

Senior Quality Assurance Consultant | 2022–2025

- Designed functional tests for spot and margin crypto trading across multiple order types on a global trading platform serving approximately 5 million users.
- Created automated system-integration tests to validate behavior across the trading engine, database, and related components.
- Identified and tested high-risk edge cases with the potential to cause system downtime or production issues.
- Managed CI pipelines, code merges, and configuration while identifying bottlenecks and improving internal QA workflows.
- Partnered with development, product, and engineering teams to translate complex business requirements into effective test coverage.
- Triaged defects, maintained Jira dashboards, analyzed logs, reproduced production issues, and trained team members on custom tools and processes.

TORONTO STOCK EXCHANGE (TMX)

Senior QA Analyst / Technical Test Lead | 2016–2022

- Led performance, capacity, and failure testing across the trading platform, including simulations of approximately 1 billion messages over two days.
- Analyzed system performance and capacity limitations, recommended improvements, and designed tests to expose vulnerabilities in order entry, message queuing, and market-data output.
- Contributed to load-test model design and participated in production deployment and validation activities.
- Coordinated code releases across multiple teams into a production-like benchmark environment.
- Planned sprint QA activities, estimates, resource allocation, task distribution, KPI reporting, and release readiness.
- Acted as a central QA contact for disaster-recovery activities and supported investigation of defects and production issues.
- Validated APIs with SOAP UI, performed performance/load testing with JMeter, and developed Selenium automation using Python.

Selected Projects: TMX Market on Close & Hardware Refresh (Lead, team of 5); Solace Middleware Upgrade (Lead, team of 5); TMX Matrix WebApp with Deloitte Digital (Lead, team of 3–4); TMX Security Risk Rating with Broadridge, Bloomberg, and DBRS.

QA Test Environment Manager | 2013–2016

- Managed and monitored production-like QA environments, including start-of-day, end-of-day, batch support, troubleshooting, and escalation.
- Supported 35 QA professionals in the equities trading space by maintaining reliable and available test environments.
- Led the QA lab migration from Windows XP physical machines to Windows 7 virtual machines.

Quality Assurance Analyst | 2011–2013

- Managed test cycles and supported release approvals across non-production and production environments.
- Validated equities-trading billing calculations using Oracle SQL and detailed business-rule analysis.
- Executed functional, regression, equivalency, performance, and user-acceptance testing across trading applications.
